

Valon Kone Kodiak Debarker

FibreMax

Feedrolls with
Replaceable
Bolt-On Inserts

NEW

KODIAK
DEBARKER

debarker specialist

Improved machine operation with minimum fibre damage

New FibreMax feedrolls with replaceable bolt-on inserts are available on all VK Kodiak debarker models starting from Jan 2015. The new feedrolls provide superior centering and holding of the logs as they transit through the debarker at high speeds. The bolt-on inserts allow for more efficient and safer maintenance of the feedrolls providing maximum performance. These new FibreMax feedrolls will increase fibre recovery while minimizing log damage.

Three insert styles available

- **Flat.** Minimizes log marking and ideal for the out-feed rolls
- **Sharpened.** Debarking for normal conditions. Standard installation on all new VK machines
- **Spiked.** Debarking in difficult conditions (e.g. frozen logs)

Minimal fibre damage and better chip quality

- Better grip of feedrolls prevents log rotation, especially in difficult conditions
- Smaller risk of splitting log ends

- Inserts leave less cutting marks on the log resulting in higher chip quality
- Different insert models can be used simultaneously on different feedrolls of the machine which minimizes the marks left from the feedrolls on the log

Recondition of feedrolls easier

- Bolt-on inserts can be easily changed - no special skills required
- Each insert is attached with two bolts
- It takes about one hour per wheel to change the inserts

The new feedrolls are also available for old VK machines. For more information about FibreMax feedrolls, please contact your local VK agent or Valon Kone directly.
